

# Leafy Cross Purificator Embroidery

The chain stitch or stem stitch linework is stitched first throughout (Black outlines), continuing along the outside perimeter of the satin filled areas to create an edge that the satin stitches will be fitted over. This visually evens out the edges, and creates light padding in the satin filled petals and leaves. The chain stitch on this purificator is probably done by a Cornely chain stitch machine, but can be executed by hand as well, or rendered as a stem stitch or split stitch.

This design is printed at the correct size for embroidering on a purificator. Trace it on your linen, centering it from side to side and lining the bottom of the cut edge of your purificator with the bottom of this paper. Give your linen a couple of light applications of spray starch before tracing the design, which makes tracing easier, and will add some stabilization to lessen puckering from the embroidery stitches.

Get the rest of the story and the other three designs here.
